

How to use ZocuShield™ gel

Place a drop of ZocuShield gel onto the index finger.

Place a thin strip of gel onto the lower eyelid across the lower lash line, like applying an eyeliner.

Close eyelids and gently massage the gel across the lashes and eyelids until it's almost dry.

Repeat for the other eyelid.

SEE IT, FEEL IT
OKRA FOR YOUR EYES

What is ZocuShield™

ZocuShield gel is unlike any other eye care product you may have tried. It is not an artificial tear. It does not contain tea tree oil or hypochlorous acid. Nor is it a prescription drug. ZocuShield uses a patented system called Zokrex™ that delivers activated okra complexes to help your eyes look and feel better.

Why use ZocuShield™

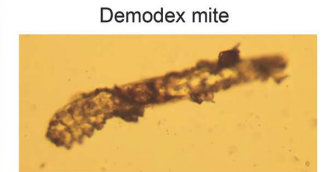

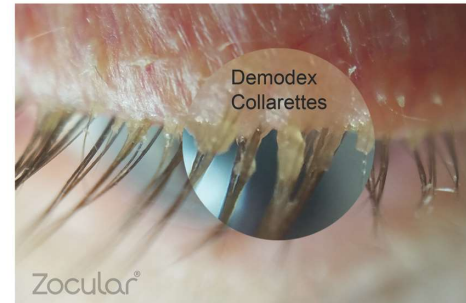

It's no fun to wake up with red, crusty eyes that are hard to open. It's even more challenging to have your eyes feel gritty, watery, and blurry throughout the day, which only worsens as the day goes on. Reading, driving, and computer work becomes an exercise in frustration. All the recommendations from Google searches, friends, doctors, and relatives have not really helped and is becoming quite expensive.

It's now time to try ZocuShield. Just one application is all it takes for your eyes to feel the difference between ZocuShield and everything else you may have tried!

- Activated okra Zokrex platform
- pH balanced for tears
- No prescription required
- Immediate and lasting results

Why healthy eyelids are important

There's a lot more to your eyelids than just lashes and skin. There may be an excessive amount of unwanted oily residue, bacteria, and even mites residing on your eyelids. This accumulation can be subtle and hard to see with your naked eyes. Only a thorough eye exam can detect problems on your eyelids that may be making your dry eye symptoms worse.

Ask your eye doctor about ZEST™

ZEST, or Zocular Eyelid System Technology, is a gentle, clinically effective office procedure that can only be performed by using ZocuKit, which was specifically developed to deep clean and optimize the health of your eyelids without the trauma or discomfort associated with traditional eyelid debridement processes. ZEST uses a proprietary micro-matrix Zocuswabs to bind and lift away all the eyelid debris with surgical precision. A daily at-home regimen with ZocuShield, ZocuWipe, and/or ZocuFoam is then used to maintain and accentuate the beneficial effects from ZEST.
